Our services are directly related to the production schedule of the contractor and the project total quantities. Our total estimate may increase or decrease based on production rates and/or project quantiles. Services are provided as per shift estimates and are inclusive of all field inspection, field testing, laboratory testing and typical engineering support needed for this project.

Trinity Eng. does not guarantee the performance of the contractor by performing these services. Trinity Eng. performance of these services shall not relieve the contractor of his obligation to perform work in conformity with the drawing and specifications.

Assumptions:

We propose to utilize a laydown inspector and field/ ITC technicians to perform the field inspection, pull the required samples in the field, monitoring and obtaining cores required for density determination.

Option 1 Assumptions:

- A Plant Production Technician will be provided by the HMA Supplier to conduct aggregate tests

Option 2 Assumptions:

- Trinity Engineering will provide a Plant Production Technician to conduct aggregate tests

Trinity Engineering Laboratories will provide Straight Edge testing services according to the Special Provision. Hard and electronic copies will be provide to your company. Data/Density Coring operation will be done after the production as per the special provision. The contractor is responsible for traffic control. If operations are outside of the normal production for either Data/Density coring or straight edge testing, the hourly rates change to a two man crew at \$200.00 per hour. Data Coring price is based on the assumption of moving traffic control. If traffic control impedes the coring operation, then additional cost could occur.

Please Note:

****0-4 hours worked will be billed at 4 hours****

****4-6 hours worked will be billed at 6 hours****

****6-8 hours worked will be billed at 8 hours****

****Shift rate divided by 8 hours is the hourly rate (excluding overtime rates)****

Our cost are based strictly on the construction schedule assumptions presented herein. Any additional testing requested, changes in the construction schedule or change to the presented assumptions will affect our costs, which will require that the above estimated costs be revised accordingly.

Overtime costs for Saturday and Sunday shifts will be multied by 1.15 and 1.3, respectively.

If lime treatment occurs on a non scheduled paving day, the required quality control testing for lime treated aggregates will be billed at \$ 900 per shift.

If paving exceed 8 hours per shift, each additional(option 1) will be billed at \$130 up to 12 hrs. thereafter \$ 175.00.

If paving exceeds 8 hours per shift, each additional
